SuiteDynamics
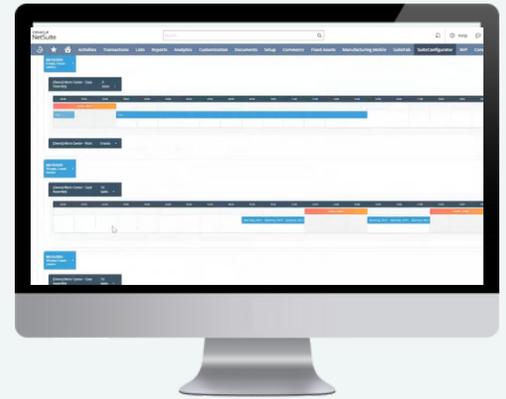

Transform Your Job Shop Operations

A powerful, fully integrated solution built for custom manufacturers, combining quoting, configuration, production, and fabrication workflows inside NetSuite.

Dynamic Configurator

Easily build and customize make-to-order products with a flexible, rules-based configuration engine.

Best Fit For: Make-to-order manufacturing, complex BOM & routing construction, and rules-based product configuration.

Value: Efficient, single unified UI to input data and output as a completed product. Support of multiple outputs and item types from work orders.

Finite Capacity Planner

The missing link between ERP data and real-world production constraints.

Best Fit For: Discrete manufacturing, custom fabrication, and job shop environments with limited machine and operator capacity.

Value: Resource-based scheduling, reduced downtime and configuration changeovers, and decision confidence from "what-if" scenarios.

Dynamic Fabrication

Purpose-built for metal fabrication: manage routing, welding, nesting, and cut-to-length processes.

Best Fit For: Metal fabrication, steel cutting & slitting, rubber, fiber, welding & cutting processes.

Value: Built-in calculations for claim quantity, material costing, and extended cost with bill of materials tracking and revisions for a specific lot tied to lot record.

Dynamic CPQ

Quickly configure, price, and quote complex custom jobs, all within NetSuite.

Best Fit For: Robotics, complex custom manufacturing, modular manufacturing, and sub-assemblies.

Value: Load sub-assemblies and components, input parts into each assembly, and get real-time cost estimates and % markup calculations.

Dynamic Formula

Designed for batch production, formula-based manufacturing, and ingredient-level precision.

Best Fit For: Pharmaceuticals & supplements, metal powder blends, batch production processes, and formula-based manufacturing.

Value: Manage routing, nesting, welding, cutting, and assembly in one connected system with ingredient-level tracking.

Dynamic Quality

Automate quality control standards with QC task generation, compliance workflows, and real-time dashboards.

Best Fit For: Regulated industries with quality compliance requirements.

Value: Real-time quality control task tracking with assignee management and due date monitoring with automated communications to relevant parties.

NetSuite Job Shop Implementation That Works

REDEFINING JOB SHOP MANUFACTURING

Standard NetSuite isn't designed for the complex, custom nature of job shop manufacturing. While it works well for high-volume, repetitive production, job shops need specialized solutions for make-to-order manufacturing, complex quoting, and real-time shop floor management.

That's why we created the Dynamic Job Shop Bundle to solve the specific challenges job shop manufacturers face every day.

Module Implementation

STARTING AT
$10K
ONE TIME

No support fees
No user-based pricing
Priced on estimated hours

Bundled Module Discounts

2-3 MODULES
15% SAVINGS

4-6 MODULES
20% SAVINGS

Job Shop Assessment

Your assessment includes:
- Manufacturing type analysis and process review
- Module demonstration and ROI calculation with your actual data and metrics
- Implementation timeline and cost estimate
- Module selection recommendations

Module	Tier	Annual Price
Configurator	Standard	$12,000
Configurator	Advanced	$21,000
Finite Capacity Planner	Standard	$12,000
Finite Capacity Planner	Advanced	$21,000
CPQ	Standard	$21,600
Formula	Standard	$24,000
Fabrication	Standard	$16,800
Fabrication	Advanced	$24,000
Quality	Basic	$9,000
Quality	Standard	$15,000
Quality	Advanced	$22,800
