

Manufacturing Execution. Built Natively for NetSuite.

NetSuite runs your business. SuiteX MES runs your shop floor.
One system, no integration gap, no data lag.

What it does?

Most manufacturers on NetSuite still run the floor on paper travelers, whiteboards, or a disconnected system that never quite syncs with ERP. SuiteX closes that gap without adding another vendor to manage. What happens on the floor is live in NetSuite the moment it happens.

See how
it works →

Key Features

Keep jobs moving

- Work order management
- Real time production tracking
- Shop floor communication
- Live job status

Catch defects early

- In process QC
- Nonconformance tracking
- Corrective actions
- Closed loop with production

See the floor live

- Real time production data
- Inventory visibility
- Labor and resource view
- Compliance documentation

Best Fit

- On NetSuite but still running the floor on paper, spreadsheets, or a disconnected system? This is the conversation.
